

Upgrade & retrofit solution | NPB Bagger

# NPB Bag Folding Kit

Modernize your NPB Packaging Center's Bagger with next-generation bag folding precision. This upgraded bag folding solution enables straighter, high-quality folds with greater process stability.

## Straighter, high-quality folds

The NPB Bag Folding Kit improves bag control throughout the folding process, enabling straighter and more consistent, high-quality folds. Stable, well-formed folds support smoother handling downstream and for end customers, and contribute directly to improved delivered product quality and customer satisfaction.

## Future-ready upgrade with minimal downtime

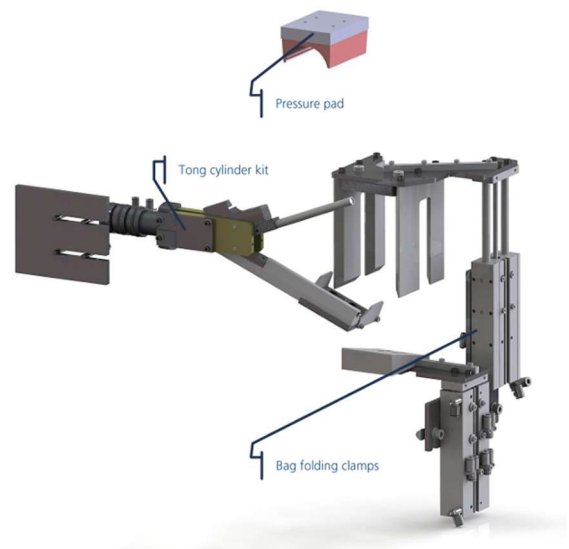

The upgrade kit is designed for installation in existing NPB Baggers. A robust yet lightweight aluminum design reduces wear and increases durability, while also replacing a soon-to-be discontinued tong cylinder with the latest generation technology.

Sidewalls and the re-designed spoon guide the bag flaps precisely, ensuring a stable folding process even at high speeds. Accurate positioning prevents misalignment, reduces rejects, and supports consistent production over time.

This upgrade aligns your machine with current standards, without replacing the entire system giving you next-level performance.

## Key advantages on the machine and production line:

- **Straighter, high-quality bag folds** - enable stable, consistent folding that supports higher line efficiency and improved product quality.
- **Higher productivity and process stability** - reliable folding performance allows stable operation.
- **Future-ready performance** - aligns your machine with modern standards and supports long-term production efficiency and competitiveness.
- **Increased customer value** - better bag folds enable easier handling and higher delivered product quality to end customers.

*The NPB Bag Folding Kit includes the new tong cylinder solution.*
